MAKING COMPUTERS THINK FOR 25+ YEARS

PRECISION. INNOVATION. PUBLIC SERVICE.

At E-Ring, Inc., we believe that modern governance requires more than just digital record-keeping; it demands intelligent, high-performance software that transforms complex data into actionable insights. As an established leader in the government technology sector, we specialize in developing sophisticated software solutions engineered specifically for the unique demands of local jurisdictions.

BRIDGING TECH & PUBLIC ADMINISTRATION

We have built our reputation on a foundation of technical excellence and a deep understanding of the public sector. Our mission is to empower local governments with high-tech tools that streamline operations, enhance transparency, and ensure fiscal accuracy. By replacing fragmented legacy systems with our cohesive, innovation-driven Capture platform, we enable departments to work with unprecedented speed and precision.

WHY E-RING?

Engineered for Excellence: Our software architecture is built by experts who prioritize scalability, security, and high-speed processing.

Government-First Focus: We don't provide "one-size-fits-all" enterprise software. Every line of code is written to solve the specific regulatory and administrative challenges faced by local officials.

Proven Reliability: With years of successful implementations, we are a trusted partner to jurisdictions looking to modernize their infrastructure without compromising on stability.

AI-INFUSED PUBLIC SUPPORT

ABOUT

Capture Connect uses AI technologies beyond admin automation. Capture Connect offers powerful ways for local government offices to interact with and better support the public. By leveraging AI as a “digital concierge,” local governments can provide services faster, more inclusively, and around the clock.

PREDICTIVE NOTIFICATIONS

Instead of residents having to search for information, AI allows the county to be proactive. Citizens stay informed of hyper-local issues affecting their daily lives without having to dig through a generic news feed.

24/7 VIRTUAL ASSISTANCE

Most county offices close at 5:00 PM, but residents often have questions or need to start applications late at night. Residents get instant answers without waiting on hold for a clerk or having to visit an office in person.

CAP*ture*

SMART ACCESSIBILITY

Residents with visual, hearing, or motor impairments, navigating traditional government websites can be difficult. Capture ensures the county remains compliant with ADA standards.

MULTILINGUAL ACCESS

Language barriers are a significant hurdle in diverse US counties. Standard translation often misses local nuances or takes days for a human to process. Non-native English speakers can fully interact.

STREAMLINED SELF-SERVICE

Filing for a business license or a building permit is often the most frustrating interaction a resident has with their local government. Dramatically reduce the rejection loop and get things started much faster with AI.

AUDIT TRAILS & SECURITY

AI-powered public support does more than just answer questions; it serves as a secure "digital airlock" between the public and sensitive county databases. It is uniquely positioned to improve both audit trails and security.

Compatible Offices

✔ County Clerk

✔ Tax Assessor

✔ Treasurer

✔ County Courts

✔ Social Services

✔ and more...
